

## VK2RWB (Yarrawonga)

The repeater had works done to improve the range. Many thanks to all those who did the heavy lifting. The repeater is now workable way past Corowa going east towards Albury, no exact coverage map exists presently. So any reports will be useful.

The repeater is linked with connectivity to many parts of West Victoria, including Mitcham in Melbourne and Geelong.

VK2YMU provides a simplex link that allows those outside the 2RWB range to access the system. VK2YMU is an attended service. Should the licensee not be at home, the service will not be available.

There are plans for a repeater system in Balldale in the near future.
